

Experienced and well qualified training staff provide excellent support and are committed to improving trainees' experience

## A Trusted Partner

### Training from Educators

Based on our extensive experience designing and delivering training for industry leaders such as City and Guilds and the Royal School of Military Engineering, we are well placed to partner with you to provide the highest quality training, leading to the best results. Our impeccable background of scaling training delivery, and our roots as a subsidiary of Mid Kent College, put us in a unique position to understand what makes training most effective across the most challenging environments. What motivates people to learn? How can you best support students of all abilities and experience through their learning journey?

Skills and education are more critical in today's fast-changing world than ever before. We'll work with you to empower and enable the professionals of the future.

### Technology that drives Competence

For almost ten years, we've been providing a wide range of high quality artisan, technical and professional training programmes for military engineers at the Royal School of Military Engineering. For personnel heading out to the front line, competence needs to be absolutely assured, and professional skills development needs to be continual, often in adverse conditions. We create learning spaces that offer practical experience where it's needed, we combine face-to-face guidance with engaging e-learning for effective knowledge transfer, and we use virtual and augmented reality where challenging environments cannot easily be replicated.

The goal is always to drive towards competence – better, faster, and with a constant eye on value.

# Training Design, Delivery & Assessment

We will support you with all aspects of training design and delivery, from training needs analysis right through to the certification of competent professionals.

## E-learning

As pioneers of e-learning, you can trust us to create learning experiences that engage your learners, making efficient use of new technology to get the results you need.

## Blended Learning

Our modular approach makes it straightforward to design bespoke solutions and develop a blended learning experience to fit your learners' environment. The goal is to make it as easy as possible to upskill, to get the knowledge and practice needed to achieve competence.

## Classroom Courses

Our expert trainers will deliver face-to-face training that gives your learners the best opportunity to embed new knowledge and practise new skills. We will deliver bespoke in-company training on your premises, or welcome delegates onto our public courses in a variety of venues.

## Defence
